

Figure 6: This figure is a structure map on the top of the Mississippian System. It shows west-southwest, present-day tilting of sediments at this surface. Warmer colors represent higher structural positioning. The elevations listed are in feet below sea level, and the contour interval is 50 feet. The tops data were picked from downhole logs by the author. Where no logs were available, the tops were modified from IHS, 2009.
